

The Revella Group

www.revellagroup.com

The Revella Group is a woman - and minority - owned, disadvantaged business enterprise offering a full range of project management and support services in both the Washington, D.C. area and internationally. We have decades of experience in the local and international construction industry, providing Project Management, Staff Augmentation, and Acquisition services.

The Revella Group is not your average contractor; we are truly international - in scope, in background, in composition. As a result, our approach to doing business reflects our diversity and the importance of relationships - whether with our clients, our network, or our communities.

Our specialty is sourcing high-caliber, intermediate and senior-level technical professionals for major infrastructure construction projects. Our company experience includes providing engineering services on the Metropolitan Washington Airport Authority's Silver Line (*Jacobs Engineering*), supporting DBE management and process development for a Purple Line proposal team (*Maryland Transit Connectors*), and implementing renewable energy project development activities (*Nexant/USAID*). Our networks cover a broad range of project functions and disciplines, including engineering (civil, mechanical, electrical); project management (PMI certified); scheduling (Primavera P6, MS Project); monitoring and evaluation; and accounting.

What sets us apart from other local DBEs is the depth and breadth of expertise of our key personnel, which includes a former CFO to a major multinational electronics company, a former White House National Security Council staffer, a social development consultant to some of the world's largest oil and gas and mining companies, and a 15-year construction industry veteran with a proven track records working on major DC-area construction projects. We bring this diversity of skills and experiences to each and every project.

We also have in-house expertise to support your project directly. Our key personnel have extensive experience with:

- major infrastructure construction projects;
- power project development (including renewable energy);
- corporate social responsibility, social development and human rights projects (policy development; program management and implementation; monitoring and evaluation);
- risk assessment and mitigation, conflict resolution, and strategic analysis;
- stakeholder mapping, community engagement and training.

We support the Energy, Engineering, Aviation, Oil and Gas, Mining, Rail and Mass Transit industries.
